To Whom It May Concern:

Re: Lykins Contracting, Inc. Letter of Recommendation

Lykins Contracting has completed several cast iron water main replacement projects for The Butler County Water & Sewer Department. These projects include installation of 12, 16, and 24 inch diameter ductile iron water main. Lykins Contracting did exemplary work in installing these replacement water mains through areas developed with numerous commercial entities and experiencing high volume traffic. Lykins Contracting was excellent in working through various unique situations encountered in these areas while still minimizing contract change orders.

Lykins Contracting also excelled in accommodating residences and businesses along the construction route. They did everything possible to minimize impact by ensuring access and affecting water service for as short of a duration as possible.

We would be happy to work with Lykins Contracting again on future projects.

Sincerely,

BUTLER COUNTY WATER AND SEWER DEPARTMENT
